

Setting Up the Training Week

A 2-page quick start for coaches using **Week Setup** in the MicroPulse Coach Dashboard.

Why Week Setup matters

Your custom training program defines **what** each day looks like (GENERIC, MD-4, MD-2, MD-1, MD...). Week Setup tells MicroPulse **which day is which** on this week's calendar. Without an active Week Setup, athletes either receive the wrong session for the day or no session at all — and your strength program never reaches them.

How a match drives the week

When you enter a match date, MicroPulse counts backwards from kick-off and assigns each weekday to an MD slot. The same logic runs forward for recovery days. Here is a typical Friday-match week:

Mon	Tue	Wed	Thu	Fri	Sat	Sun
MD-4	MD-3	MD-2	MD-1	MD	MD+1	OFF
FORCE	NEURAL/VEL	POLISH/CALM	ACTIVATION	MATCH	POST MATCH	REST

Each cell maps to the matching template in **Mitt æfingakerfi**. If you have built MD-4 = FORCE and MD-2 = POLISH for this team, those are the sessions athletes see — scaled to their daily readiness (GREEN / YELLOW / RED).

Three steps

1

Week type

Open **Coach** → **Week setup**. Pick the **Monday** of the week, the **season phase** (Preseason / In-season / Playoffs / Off-season), and the week type: **No matches**, **1 match**, or **2 matches**. **Manual override** lets you steer day-by-day even on a match week — useful in pre-season.

2

Setup

On a match week, enter the **match date**, optional kick-off time, and home/away. On a no-match week (or with manual override on), pick the **daily intent** for each weekday — each intent is paired with the MD slot it represents (see reference on page 2). Set the **Intensity target** (1–10) for the week.

3

Preview & activate

MicroPulse shows the resulting 7-day strip with day type (TRAIN / RECOVERY / GAME / OFF) and focus label. Click **Save week** to keep the setup, or **Activate** → **send to athletes** to push the week to every player on the team.

Auto MD vs. Manual mode

Pick the mode that matches your phase of the season.

Auto MD — match week

You enter match dates. MicroPulse calculates MD-4 → MD+3 from those dates and pushes the matching template to each weekday automatically. Best for the regular season when the fixture list drives the rhythm.

Manual — no-match week or override

You pick the daily intent for each of the seven days yourself. Manual is forced when the week has no matches, and is also available as an **override** on match weeks — useful in pre-season, training camps, or when you want full control.

Daily intent reference

When you set an intent in **Manual** mode, the dropdown shows the MD slot it maps to. The daily session pulled from your custom training program comes from that slot.

Intent	MD slot	Day type
Force	MD-4	TRAIN
Neural / Velocity	MD-3	TRAIN
Velocity	MD-2	TRAIN
Polish / Calm	MD-2	RECOVERY
Activation	MD-1	RECOVERY
Recovery	MD+1 & MD+2	RECOVERY
Game	MD	GAME
Off	—	OFF

How the strength program reaches athletes

Each morning the player app resolves *today* → *MD slot* from the active Week Setup, fetches the GREEN template for that slot from your custom training program, and serves each athlete the GREEN / YELLOW / RED variant matched to their readiness score.

Skip Week Setup — what breaks

If no week is activated for the current Monday, MicroPulse cannot map today to an MD slot. Athletes fall back to GENERIC (best case) or see no session at all.

Tips

- ✓ Set up the new week on **Sunday evening or Monday morning** — athletes pull the plan when they open the app.
- ✓ Match dates auto-snap to the right Monday. Changing a match date moves the week start with it.
- ✓ Keep the **season phase** in sync — pre-season and in-season pull from different program sets.
- ✓ Confirmation after Activate: “Vika var virkjuð ✓ Leikmenn fá nú réttan æfingadag sendan.”
