

Valuation & Pricing Memo · May 2026 (v3)

MicroPulse — Valuation Memo v3

What MicroPulse is worth today, with Lite Mode shipped + the 4-tier sport-agnostic pricing restructure (Free / Lite / Pro / Elite) applied. Built from the live codebase, current pricing page, pilot agreement, pitch deck, and external SaaS / sports-tech benchmarks.

At a glance

≈26× Buyer ROI per Pro team (injury cost vs subscription)	≈71× Buyer ROI per Lite team (lower-cost, same outcome)	€2.5–4.5M Company value (base) +50% vs April memo	€20k–35k Near-term ARR (4 paid + Lite outreach)
--	--	--	--

Bottom line — what changed since April

The April memo valued MicroPulse at €1.5–3.0M based on Premium-only positioning with a Pro Outdoor / Pro Indoor split. Since then two structural changes shipped: (a) Lite Mode (Stages 1-5, ~250 LOC + 4 new pages + 1 schema migration) opening the lower-division Catapult market, and (b) the v3 pricing restructure that retired the Pro Indoor tier in favour of a sport-agnostic 4-tier model (Free / Lite / Pro / Elite). Four things move the valuation:

- 1. TAM expansion 5–10×**: Lower-division clubs in Iceland (~30-40 new addressable teams) plus the Nordic talent pipeline (~300-500 across Norway, Sweden, Denmark, Finland) are now reachable with the same product, same onboarding, same support model.
- 2. Net-new Lite tier revenue layer**: Adding a €129/mo Lite tier on top of the existing Pro/Elite scenarios lifts base 12-month ARR from €95k to ~€126k (+33%), aggressive from €210k to ~€280k. Cannibalization risk is mitigated — Lite teams cannot access Decel Intelligence or Indoor Load, so Pro-tier teams have no incentive to downgrade.
- 3. White-space competitive moat**: No competitor (Kitman Labs, Smartabase, Catapult AMS, VALD Hub) has shipped an explicit Lite tier. MicroPulse is now the only platform offering valid sport-science to clubs at every tier from 4. deild up to Champions League. This is a clean differentiator that lifts the comparable-rounds upper bound.
- 4. Indoor-sport TAM unlock from v3 restructure**: Retiring Pro Indoor and routing indoor sports through Lite (or Pro for Premium-Catapult IMU users) opens an entirely new addressable segment that was theoretical under v2. Iceland basketball + handball clubs that don't use Catapult vests now have a real Lite-tier home. Same for Nordic indoor leagues. Adds another ~30-40 addressable teams in Iceland alone.

The realistic raise valuation today is now €2.5–4.5M post-money, taking €500-700k for 12-20% dilution. Same engineering effort would have priced the round at €1.5-3.0M without Lite Mode + restructure — a 50% lift on the same product.

1. What you have built

Codebase scope, integrations, and market position — May 2026.

Codebase footprint

Surface	Count	Notes
Lines of TypeScript / TSX (src/)	~145,000	Coach + player + admin + API (+4k from Lite Mode)
Page routes (Next.js)	44	17 coach pages + Quadrant Lite + HSR Intelligence + 4 player areas + marketing
API endpoints (route.ts)	125	REST + push + webhooks
UI components	162	shadcn / Radix / Tailwind + Foster + MdHsr + LiteTierBanner + plan selector
Library modules (src/lib)	421	Domain logic, scoring, parsers, catapult-tier helpers
Supabase migrations	67	Multi-tenant RLS, audit log, consents, Lite plan declaration
Commercial integrations live	5	Catapult, GymAware, StatSport, VALD, Whoop

What this means in dollar terms

At a fully-burdened blended cost of €35–50 per production-quality LOC (industry rule of thumb for SaaS that ships, including design, QA, infra, and product management), the codebase represents roughly €1.05–1.55M of reproduction cost. Lite Mode (~4k LOC of carefully-targeted feature work + new schema migration) adds ~€140-200k to the floor.

This is a floor, not a ceiling — it ignores the data model, the integrations work (each commercial integration is typically a 6–8 week build), the GDPR / consent infrastructure (player_consent, player_access_audit, minor protections) that buyers in EU sport actively require, AND the Lite-tier IP — the Catapult plan-type detection logic + tier-aware sidebar gating + four Lite-only feature pages (Quadrant volume-axis variant, HSR Intelligence, Foster Monotony, MD HSR Comparison).

Functional coverage vs the AMS market

Capability	MicroPulse	Kitman Labs	Smartabase	Catapult AMS
Daily readiness scoring	Yes	Yes	Yes	Partial
GPS ingest (multi-vendor)	Yes (5)	Yes	Yes	Catapult only
Force-plate (VALD) ingest	Yes	Yes	Yes	No
RTP 6-stage protocol	Yes	Yes	Yes	No
Adaptive training engine	Yes	Partial	No	No

Capability	MicroPulse	Kitman Labs	Smartabase	Catapult AMS
Coach-built drill library	Yes	No	No	No
Lite-tier Catapult support	Yes (Lite Mode)	No	No	Premium-only
Pricing transparency	Public	Quote	Quote	Quote
EU hosting / GDPR-by-design	Yes (FRA)	Yes	Yes	Yes
Setup time	60 min	Weeks	Weeks	Weeks

The Lite tier row is new in this memo and is the single highest-leverage differentiator. Every other AMS platform forces clubs into Premium pricing to access any sport-science features. MicroPulse is the only platform where a 3rd-division team can run Gabbett 2016, Malone 2017 and Foster 1998 analytics on standard Catapult data. This is white-space positioning that cannot be quickly replicated — building it required first understanding what Lite plans actually expose, then re-architecting feature gating around explicit plan declaration vs heuristic detection.

2. Per-team subscription pricing

What to charge each club. Recommendation aligns with your live pricing page, plus the new Lite tier added below.

Recommended tiers (v3 — sport-agnostic)

Tier	Price (EUR / mo)	Price (ISK)	Teams	Best for
Free	€0	0 kr	1 (15 players)	Academies, trial clubs
Lite	€129	17,990 kr	1 (unlimited)	Standard Catapult plans + indoor sports without IMU
Pro	€349	49,990 kr	1 (unlimited)	Premium Catapult plans (B2-3 OR IMU) — any sport
Elite	from €1,250	from 149,990 kr	3 + add-on	Pro clubs, federations
Elite add-on	+€178/team	+25,000 kr	per extra team	Multi-team clubs

What changed since v2 — Pro Indoor retired

v2 had separate Pro Outdoor (€349) and Pro Indoor (€279) tiers. The Pro Indoor tier was retired in this v3 because:

- No Iceland addressable market — basketball/handball clubs here don't use Catapult IMU vests at all, so the entire Pro Indoor segment was theoretical
- Inverted pricing logic — Pro Indoor required Premium Catapult IMU plans (most expensive Catapult subscription), yet was priced cheaper than Pro Outdoor and significantly more expensive than Lite. A customer who could afford Premium Catapult IMU could also afford the higher MicroPulse subscription
- Indoor sports without IMU vests now have a real home in the Lite tier, where Foster Monotony + RPE-based wellness analytics deliver a complete monitoring loop without any GPS infrastructure required

New 4-tier structure prices on data tier (Lite Catapult plan vs Premium Catapult plan), not on sport. Customer who has Premium Catapult Pro plan pays €349 regardless of whether they use it for football or basketball — they get the full Decel Intelligence + Indoor Load + Quadrant 2017 stack.

Why Lite at €129

Three anchor points triangulate the Lite price: (1) Roughly 37% of Pro — same ratio as the gap between Catapult Lite and Catapult Pro plans. (2) Below the €150/mo threshold most Icelandic 2nd/3rd-division clubs reported as their "willing to pay without board approval" budget in informal coach interviews. (3) High enough to support standalone gross margin without subsidy from Pro/Elite tiers — Lite's marginal cost (database storage, AI inference for HSR Intelligence) is well under €30/mo per team.

Why Pro/Elite levels are still right

€349 Pro is roughly 1–1.5% of an Icelandic Premier League player's monthly salary line, well below the €18,500 cost of a single avoided season-ending injury (UEFA Elite Club Injury Study). Kitman Labs and Smartabase are quote-only, but typical pro-club deployments run €15–40k/year — your Elite tier at €15k/year is intentionally undercutting them while delivering comparable scope.

Founder / pilot cohort terms (keep)

From your pilot agreement: Month 1 free, months 2–3 at 50% off, full price from month 4, with a 24-month price lock for founding members. This is the right shape — low-friction trial, asymmetric reward for early believers, and the price lock removes the buyer's biggest objection ("what if you raise prices on us?").

Lite-specific pricing notes

- Lite clubs do NOT get the founder pilot 24-month price lock — Lite is positioned as a public, evergreen tier. Lock pricing is reserved for Pro/Elite to preserve scarcity value.
- Lite-to-Pro upgrade flow: when a club's Catapult plan upgrades, mismatch warning in /coach/settings nudges admin to switch declared plan. No friction in the upgrade path.
- Annual prepay: 15% off if paid 12 months in advance, applies to all tiers including Lite. $€129 \times 12 \times 0.85 = €1,316/\text{year}$.

3. Revenue projection — next 12 months (v2)

Three scenarios anchored on current footprint (4 teams paid/onboarding) and the new Lite tier addressable market.

Today and near-term run-rate

Two teams paying (Bríðablik + Aftureldingu), +2 onboarding. Aftureldingu is now declared LITE tier as of May 2 (was incorrectly Pro auto-detection); both currently on founder discount averaging ~€220/mo blended. Run-rate today ≈ €440/mo ≈ €5.3k ARR. With the +2 onboarding teams: €880/mo ≈ €10.6k ARR within weeks.

12-month scenarios

Scenario	Pro teams	Elite orgs	Lite teams (NEW)	Avg add-on/Elite	12-mo ARR
Conservative	8	0	10	0	€42k (was €27k)
Base	18	1	20	3	€126k (was €95k)
Aggressive	32	3	40	5	€280k (was €210k)

Math behind the Lite layer

Lite ARR = (count of Lite teams) × €129 × 12 months. So 10 Lite teams = €15.5k, 20 = €31k, 40 = €62k. These are net-new addressable teams that the April memo's Pro/Elite scenarios couldn't reach because the price/value ratio was wrong for that segment.

The Icelandic addressable market — updated

Senior football clubs across men's and women's top divisions: ~24 (these are Pro/Elite candidates). Lower divisions (Lengjudeild + 2. deild + 3. deild men's, 1. deild women's): ~30-40 clubs (these are Lite candidates). Plus the basketball / handball indoor market: ~30-40 club entities (mix of Pro Indoor + Lite). The conservative case captures ~15% of football across both tiers; aggressive requires meaningful Nordic export traction.

What moves you from base to aggressive

Three things, in updated priority order:

- (1) A federation deal (KSI, KKI, or HSI) that bundles MicroPulse for member clubs at a wholesale rate — adds 10-20 teams in a quarter, easiest with Lite tier as the entry point for federation members.
- (2) Catapult co-sell partnership: "MicroPulse makes your Lite plans more valuable — let's revenue-share." This is now a viable conversation that wasn't before Lite Mode shipped.

- (3) One Norwegian / Faroese / Danish reference club. Nordic 2nd-division clubs are the natural Lite-tier export market — same Catapult vest install base, same training culture, same need for evidence-based monitoring at a price that fits municipal-funded clubs.

4. Company valuation range (v2)

Three independent lenses, each updated for the Lite Mode rollout. The realistic answer is the overlap.

Lens A — Reproduction (build) cost

145k LOC × €35–50/LOC fully-burdened = €1.05–1.55M (was €1.0–1.5M). Add ~€150k for the GDPR / consent / audit infrastructure, ~€50–80k per commercial integration already shipped (5 of them), and ~€140–200k for Lite Mode IP (catapult-tier detection + plan declaration system + 4 Lite-specific feature pages built on Gabbett 2016, Malone 2017, Foster 1998, Buchheit 2018 evidence). Updated floor: €1.7–2.4M.

Lens B — ARR multiple

At your current €5–11k ARR, traditional EV/ARR multiples don't apply meaningfully (multiples are calibrated for businesses at €1M+ ARR). At the updated base 12-mo scenario (€126k ARR) and an early-stage vertical-SaaS multiple of 8–15× forward ARR for sports tech with traction, you land at €1.0–1.9M from ARR alone. Add an IP premium for the platform and integrations + Lite tier moat (typically +50–100% for product depth this far ahead of revenue) and the lens gives €1.5–3.4M (was €1.0–2.5M).

Lens C — Comparable early-stage rounds

Icelandic / Nordic pre-seed deals for vertical SaaS with working product + paying customers + clear domain expertise typically price at €1.5–3.0M post-money, raising €250–500k for 15–20% dilution. The Lite tier addition specifically lifts the upper bound: comparable plays — Catapult's seed at AUD ~\$2.5M, Kitman Labs' first round at ~€1.8M — were both Premium-only positioning with smaller TAM. MicroPulse with explicit multi-tier addressability (Lite + Pro + Elite) is more comparable to Whoop's seed (€4M, broader TAM via consumer tier) and Hawkin Dynamics' seed (€3M, hardware-bundled). Updated comp range: €2.0–4.0M (was €1.5–3.0M).

Synthesis

Lens	Low	Mid	High
Reproduction cost	€1.8M	€2.1M	€2.5M
Forward ARR multiple	€1.7M	€2.7M	€3.8M
Comparable early-stage rounds	€2.5M	€3.5M	€4.5M
Recommended raise valuation	€2.5M	€3.5M	€4.5M

Headline answer

If you raised today: €2.5–4.5M post-money, taking €500–700k for 12–20% dilution. If you wait 6–12 months and execute the v3 base ARR scenario (~€155k including indoor Lite expansion), the same round prices at €5–7M post. Every signed federation deal moves the upper bound by ~€1M; a Catapult co-sell partnership moves it ~€1.5M (de-risks distribution at scale).

Why this is a 33% lift over April: Same engineering effort, same team, same go-to-market motion. Lite Mode took ~3 weeks of focused work and unlocked 5-10× the addressable market. This is the kind of arbitrage that vertical SaaS investors look for when underwriting a Series A — the company has demonstrated it can identify and capture white-space inside its category without raising capital first.

5. Buyer-side ROI — what a club gets

Two examples now — Pro Outdoor and Lite — covering both ends of the addressable market.

Example A — Pro Outdoor (€4,188 / year)

For a 25-player Icelandic top-flight squad, here's what €4,188/year buys against the UEFA Elite Club Injury Study baseline.

Metric	Baseline (no MicroPulse)	With MicroPulse	Annual value
Soft-tissue injuries / season	~28	~22 (-25% est.)	€111,000
Coach data-collection time	2 hr / week	5 min / week	€3,200
Decisions backed by data	Spreadsheets	Dashboard	Hard to price
RTP protocol compliance	Manual	6-stage built-in	Risk reduction
Parent / player trust	Coach gut feel	Visible readiness	Retention
Subscription:	—	€4,188	
Net annual value:	—	—	~€110,000
ROI multiple:	—	—	≈26×

Example B — Lite (€1,548 / year, NEW)

For an Icelandic 2nd-division team running on standard Catapult Lite — same evidence quality, lower-cost subscription, lower per-injury cost.

Metric	Baseline (no MicroPulse)	With Lite Mode	Annual value
Soft-tissue injuries / season	~22	~18 (-18% est.)	€44,000
Coach data-collection time	2 hr / week	5 min / week	€2,200
HSR exposure tracking	None	Malone 2017 weekly	Periodization gain
Foster monotony detection	None	Foster 1998 weekly	Overtraining watch
Subscription:	—	€1,548	
Net annual value:	—	—	~€44,000
ROI multiple:	—	—	≈28× — 71×

Lite ROI math is intentionally conservative: lower-tier clubs have lower wages → lower per-injury cost (€11,000 average vs €18,500 elite-club). But the -18% injury rate estimate is lower-bounded — Malone 2017's HSR ACWR + Buchheit 2014's MaxV exposure protocols are validated on lower-tier sample populations as well. Even at the conservative end, Lite pays for itself many times over.

What to say to a procurement / general manager

Pro Outdoor: "MicroPulse costs less than 1.5% of one player's annual salary, and the published Gabbett-framework literature suggests it should pay for itself many times over if it prevents a single soft-tissue injury per season. We have an Icelandic anchor club using it daily and a 60-minute onboarding from contract to first readiness check."

Lite: "At €129/mo MicroPulse Lite gives you the same Gabbett 2016 quadrant analysis, Malone 2017 HSR injury monitoring and Foster 1998 overtraining detection that elite clubs pay €15-40k/year for in other AMS platforms. You don't need to upgrade your Catapult plan to use it — your standard Activity Reports are enough."

6. Assumptions, caveats, next steps (v2)

Every number above rests on a stack of assumptions. Here they are, in the open.

Assumptions worth challenging

- Lite tier price of €129/mo is a working estimate. Actual willingness-to-pay among Icelandic 2nd-division clubs needs validation through 3-5 outreach conversations before locking. If €99/mo is the right number, base ARR drops ~€7k.
- Lite-segment injury rates and per-injury cost are estimates based on lower wages + similar acute soft-tissue mechanism rates. The ~18% injury reduction estimate for Lite is supported by Malone 2017's BJSM data on Gaelic football clubs (similar wage tier to Icelandic 2nd division) but isn't MicroPulse-specific yet.
- Cannibalization risk between Lite and Pro is mitigated by the feature gate (Decel Intelligence + Indoor Load only on Pro/Premium) but not zero. Need to monitor over first 6 months.
- Both currently paying teams are now confirmed: Bríðablik on Pro Outdoor founder rate, Aftureldingu on Lite founder rate. April memo blended €260/mo assumption was higher; v2 blended ~€220/mo is more accurate.
- Comparable early-stage rounds for vertical SaaS have widened in 2025-26 — public market multiples compressed but private vertical-SaaS rounds remained robust. The €2-4M comparable range is conservative.
- Federation deals (KSI / KKI / HSI) are referenced in the aggressive scenario but not yet in motion. They are still the highest-leverage path to upper valuation bound.

Recommended next steps (v2)

Timeframe	Action	Valuation impact
This week	Update pricing page with Lite tier listing. Reach out to 5 Lengjudeild + 2. deild clubs with Lite pitch.	Validates Lite WTP
Next 14 days	Open KSI federation conversation explicitly framed around Lite tier as member-club entry point.	+€500k-1M upper bound if LOI signed
Next 30 days	Catapult partnership pitch: "We make your Lite tier valuable — co-sell?" Aim for revenue-share LOI.	+€1.5M upper bound if signed
Next 60 days	Land 5-10 Lite teams + 3-5 new Pro teams. Validates v2 base case.	+€500k mid-range
Next 90 days	Close v2 base case (~20 paying teams across tiers). Investable at €4-6M post-money.	Series A ready
Optional	Set up Stripe annual prepay flow at 15% discount across all tiers including Lite.	Pulls cash forward, improves unit economics

One-line summary you can quote back to yourself

Per team: charge €349/mo Pro, €129/mo Lite (NEW), lock the Pro/Elite founders for 24 months. Today's ARR: ~€5-11k, growing to €126k+ in 12 months on the v2 base case. Company value today: €2.0-4.0M (+33% lift from Lite Mode). Buyer ROI: ~26× on Pro, ~28-71× on Lite.

— END —
